AÏDA MOKUBE

Senior Product Designer

Atlanta, GA | aidamokube@gmail.com | Portfolio | LinkedIn

SUMMARY

Senior Product Designer with 7 years of experience across B2B SaaS product design and engineering for insurance and financial-services clients. Works as a close partner to product and engineering leadership on strategy and scope, not only execution, and is known for resolving organizational ambiguity through rigorous, cross-functional research. Embeds trust and governance into every AI feature shipped, and is equally recognized for leadership that extends beyond individual contribution: hiring, mentoring, and building team capability.

SHAPING PRODUCT STRATEGY

- **Trusted Partner:** collaborates regularly with senior leadership (VP and SVP level) to define product strategy and vision, helping determine phased approaches for transformative feature additions; direction is often adopted into the roadmap.
- **Platform direction:** designed and led a cross-functional research study (8 participants, 6 functions) that resolved a strategic disagreement over platform self-service direction, replacing conflicting opinions with a unanimous, quantified target that product and engineering leadership both aligned behind.
- **Scope and roadmap:** built an independent, data-grounded scope analysis that drove the MVP decision for a foundational feature across UX and Engineering leadership; promoted to Senior UX/Product Designer on the strength of judgment like this.

WORK EXPERIENCE

Senior UX/Product Designer — Precisely *2024 – Present*

- Sole designer for two publicly launched AI product suites on a B2B SaaS platform for regulated industries: a 3-agent AI writing suite and a Next Best Action recommendation engine.
- Build clickable prototypes as HTML with Claude (Cowork, Code, and Design) in the design system across all current work. Use the codebase functionality in Figma Make (beta) to work toward giving developers code they can reuse rather than recreate.
- Established AI governance principles (traceability, explainability, user control) applied company-wide across all of Precisely's AI initiatives, not limited to the two product suites directly owned; managed 2 contractors on separate AI features to uphold these standards.
- Recognized by VP-level leadership as having storytelling as a superpower for translating complex, ambiguous tradeoffs into clarity for senior stakeholders.
- Caught and corrected a technical shortcut that had overridden a user-control commitment before it reached production.
- Delivered 100% of features on schedule, including a from-scratch AI-powered search feature; recognized as a top performer company-wide.

UX/Product Designer — Precisely *2022 – 2024*

- Led a cross-team UX debt audit and prioritization exercise ahead of a platform migration to Angular; partnered with the Director of Engineering to establish new responsivity guidelines.
- Led a separate cross-functional process-improvement initiative in 2023, running workshops across engineering, UX, and product to fix a UX Review process that was creating tensions at deployment time.
- Contributed new components and updates to the jointly owned design system alongside ongoing feature delivery.
- Introduced unmoderated usability testing (Maze) to the team, including the company's first client-facing usability study.

UX Digital Product Developer — Kimberly-Clark Professional *2019 – 2020*

- Designed and prototyped an installer companion app concept, self-teaching MarvelApp after not having design software access.
- Partnered with the lead UX designer on the core mobile experience through design feedback and usability research; led prioritization and QA/Alpha-Beta testing.

Materials Product Engineer — Kimberly-Clark *2017 – 2019*

- Led cross-functional innovation projects applying design thinking methods across baby/child care, feminine care, and industrial nonwoven products.

- One product improvement delivered a 67% performance gain and $619,000-800,000 in annual savings; earned nine patent grants along the way.

LEADERSHIP & INITIATIVE

- Ran a full hiring cycle for an intern at Precisely, reviewing applicants, conducting interviews, and making the hire; designed the onboarding program used for that hire, later adopted by HR as the official onboarding process company-wide and recognized with a portfolio-featured testimonial.
- Covered manager responsibilities during a period of parental leave and mentored a Senior designer.
- Built a self-serve AI prompt library and enablement resource used as the team's informal onboarding reference.

CORE SKILLS

Product Design • UX Design • User Research • Usability Testing • Interaction Design • Information Architecture • Design Systems • AI/UX Governance • B2B SaaS • Product Strategy & Scope Definition • Storytelling & Executive Communication • Cross-functional Leadership • Stakeholder Management

Tools: Figma (expert), Figma Make, Sketch, Notion, Miro, Jira, Maze, Claude Cowork, Claude Code, Claude Design, Copilot

EDUCATION

B.S., Biomedical Engineering — Georgia Institute of Technology, 2017

Graduate Studies, Dentistry — University of Louisville School of Dentistry, 2020 – 2021
