AÏDA MOKUBE

Senior UX Designer

Atlanta, GA | aidamokube@gmail.com | Links: https://aida-portfolio-two.vercel.app/ | https://linkedin.com/in/aidamokube

SUMMARY

Senior UX Designer with 5 years of design experience spanning B2B SaaS and experiential product design, plus 2 years in engineering. Known for resolving organizational ambiguity through rigorous, cross-functional research and embedding trust and governance into every AI feature shipped. Equally recognized for leadership that extends beyond individual contribution - mentoring, developing, and building team capability.

CORE SKILLS

User Research • Cross-functional Facilitation • Storytelling & Executive Communication • AI/UX Governance • Design Systems • Interaction Design • Design Strategy • Stakeholder Alignment • Mentorship

Tools: Figma, Sketch, Notion, Miro, Jira, Maze, Claude, Copilot

WORK EXPERIENCE

Senior UX Designer — *Precisely* ***2024 – Present***

- Led a cross-functional research study (8 participants, 6 functions) that resolved a strategic disagreement over platform self-service direction, delivering a unanimous, quantified 4.6/5 target.
- Sole designer for two publicly launched AI product suites on a B2B SaaS platform for regulated industries: a 3-agent AI writing suite and a Next Best Action recommendation engine.
- Established AI governance principles - traceability, explainability, user control - applied across every AI feature shipped.
- Caught and corrected a technical shortcut on Next Best Action that had silently overridden the team's own user-control commitment before it reached production.
- Delivered 100% of aligned RCX features on schedule; recognized by VP-level leadership as having storytelling as a "superpower" for translating complex, ambiguous tradeoffs into clarity for senior stakeholders.
- Onboarded and mentored a new Senior UX Designer joining the team.
- Recognized as a top performer company-wide.

UX Designer — *Precisely* ***2022 – 2024***

- Built a comprehensive scope analysis to drive a data-grounded MVP decision across UX and Engineering leadership on a foundational feature, after scope and timeline had drifted out of alignment; promoted to Senior UX Designer on the strength of judgment like this.
- Led a cross-team UX debt audit and prioritization exercise ahead of the platform's Angular migration; partnered with the Director of Engineering to establish new responsivity guidelines.
- Self-taught API fundamentals and authored the team's first UX-driven API feature requirement proposal for engineering.
- Led the UX team's day-to-day operations during a manager's extended parental leave.
- Built a first-of-its-kind process pairing feature releases with usage analytics, closing a longstanding measurement gap.
- Introduced unmoderated usability testing (Maze) to the team, running the company's first client-facing usability study.
- Ran an independent heuristic evaluation of the team's legacy product; the resulting process became the basis for a formal UX Debt Tracker.

UX Digital Product Developer — *Kimberly-Clark Professional* ***2019 – 2020***

- Designed and prototyped an installer companion app concept, teaching myself MarvelApp after not having design software access.
- Partnered with the lead UX designer on the core mobile experience through design feedback and independently-run usability research.
- Led prioritization and QA/Alpha-Beta client testing; supported company-wide campus recruiting, including career fairs and resume review for HR.
- Managed stakeholders, budget, and timeline; led cross-functional prioritization and embedded UX in QA testing prior to release.

Materials Product Engineer — *Kimberly-Clark* ***2017 – 2019***

- Led cross-functional innovation projects across baby/child care, feminine care, and industrial nonwoven products, applying design thinking methods - including focus groups and self-built user testing plans - to keep user needs central to engineering decisions.
- One product improvement I identified delivered a 67% performance gain and now generates $619,000-800,000 in annual savings; still sold commercially today.
- Earned nine patent grants; this technical foundation became the early basis for my transition into UX design.

LEADERSHIP & INITIATIVE

- Designed and led the team's complete internship program - recruitment, onboarding, and evaluation - later adopted by HR company-wide.
- Adapted a stakeholder-influence framework - including named personas and an org chart mapped to real influence - now used team-wide to plan engagement with stakeholders across the org.
- Built a team-wide AI prompt library and resource hub, reducing redundant trial-and-error across design and product.

EDUCATION

Graduate Studies, Dentistry - University of Louisville School of Dentistry, 2020 – 2021

B.S., Biomedical Engineering - Georgia Institute of Technology, 2017
